

CONTEXT COMMANDER

Logo & Brand Design Manual

v1.0 · 27 August 2026

TWO SPEAKERS. ONE SHARED CONTEXT.

Flat vector system · vendor-neutral · built for dark and light surfaces

01 Brand idea

CORE CONCEPT

The mark represents two independent participants - people, chats, CLI agents or services - that do not merge into one identity. Instead, they share a common context through Context Commander.

The two speech bubbles form an almost closed frame. Their tails point outward in opposite directions, making it clear that two separate actors are talking through a shared middle layer.

The center is deliberately vendor-neutral: a context ring, four framing brackets and relay nodes. It should never resemble a specific AI vendor mark.

ANATOMY

A left speaker / context source **B** right speaker / context consumer

C shared context core / relay

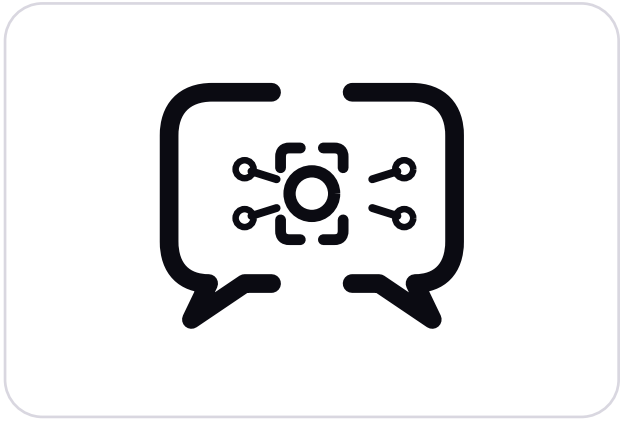

02 Logo system

MONOCHROME

SMALL-SIZE ICON

192px 64px 32px

Below 48 px use the simplified favicon variant. Do not force the full relay-node detail into tiny sizes.

03 Color system

PRIMARY PALETTE

Context Pink

#FF2D8D

Primary left-side identity / attention

Relay Violet

#7A35F5

Primary right-side identity / relay

Void

#0B0B12

Dark surfaces, app icon, UI base

Paper

#FFFFFF

Light surfaces, inverse symbol

Mist

#F4F3F8

Panels / neutral background

No gradients required.

The core logo system uses solid fills only. This keeps the mark reliable in SVG, favicons, docs, terminal-related surfaces, embroidery/print and monochrome export.

Pink on Void	strong accent
Violet on Void	decorative/logo use

ACCESSIBILITY NOTE

Use black/white for body text. Context Pink has good contrast on Void; Relay Violet is primarily a brand accent and should not be used for small text on dark surfaces.

04 Clear space & scale

X minimum clear space = 1× context-core ring diameter

MINIMUM SIZES

Full mark	**48 px**	Use full nodes + center details.
Favicon mark	**16-47 px**	Use simplified favicon SVG.
Horizontal lockup	**220 px wide**	Smaller: use icon only.
Print mark	**14 mm**	Below this use simplified icon.

SHAPE INVARIANTS

- Keep the inward-facing gap between both bubbles.
- Keep the two tails pointing to opposite sides.
- Do not merge the two brand colors into a gradient.
- Keep the context core visually centered between speakers.

05 Typography & wordmark

RECOMMENDED FAMILY

Inter / modern grot

The generated SVG lockups use a fallback font stack: Inter, Arial, Helvetica, sans-serif. For a fixed production master, convert the final wordmark to outlines in a vector editor.

VOICE

CONTEXT COMMANDER

Uppercase, strong weight, generous tracking. Avoid sci-fi novelty fonts: the icon carries the technical personality; the wordmark should stay readable and durable.

Context Commander

Project: acme/context-commander

artifact.updated

Claude Code · via shared project context

```
ccd project resolve acme/context-commander
```

Use the brand colors as accents, not as the only text colors. UI text should primarily use neutral black/white for contrast.

06 Usage: do / don't

DO

✓ **Use flat duotone mark**
Keep the two voices visually distinct.

✓ **Use neutral center core**
The shared context is vendor-neutral.

✓ **Use dark & light variants**
Choose the correct core color for the surface.

DON'T

× **Do not add gradients or glow.**
The primary system is intentionally flat.

× **Do not swap pink and violet sides.**
Left/right color assignment is part of recognition.

× **Do not close the inner gaps.**
Two participants must remain visibly separate.

× **Do not skew, stretch or rotate.**
Preserve the geometry and aspect ratio.

× **Do not place detailed mark below 48 px.**

Recognition test

If the icon still reads as two independent speakers sharing one central context when shown in monochrome, the geometry is doing its job. Color strengthens the identity; it must not be required to explain the concept.

07 Digital implementation & assets

CANONICAL TOKENS

```
--cc-context-pink: #FF2D8D;
--cc-relay-violet: #7A35F5;
--cc-void: #0B0B12;
--cc-paper: #FFFFFF;
--cc-mist: #F4F3F8;
```

SVG ASSETS

```
cc-mark-on-light.svg
cc-mark-on-dark.svg
cc-mark-mono-black.svg
cc-mark-mono-white.svg
cc-logo-horizontal-on-light.svg
cc-logo-horizontal-on-dark.svg
cc-logo-horizontal-duotone-on-light.svg
cc-logo-horizontal-duotone-on-dark.svg
cc-favicon.svg
cc-app-icon-dark.svg / light.svg
```

IMPLEMENTATION NOTES

- SVG is the canonical logo source. PNG exports are convenience assets only.
- Primary logo uses flat fills and strokes; no filters, shadows or gradients are required.
- Horizontal wordmark SVGs ship as vector outlines based on Inter Bold; no font file is required.
- Use the simplified favicon under 48 px.
- Keep logo assets independent from application theme tokens so rebranding does not alter semantic UI colors.

Brand principle

Two speakers remain independent. Context Commander is the shared layer between them.
