

CONTEXT COMMANDER

Logo & Brand Design Manual

v1.1 · 27 August 2026

TWO SPEAKERS. ONE SHARED CONTEXT.

Flat vector system · vendor-neutral · dark/light ready · SVG-first

01 Brand idea

CORE CONCEPT

The mark represents two independent participants - people, chats, CLI agents or services - that stay separate while sharing one common context through Context Commander.

Two speech bubbles form an almost closed frame. Their tails point outward in opposite directions; the relay nodes on both sides connect meaningfully toward the shared context core.

The center is deliberately vendor-neutral: a context ring plus framing brackets. The symbol should never resemble a specific AI vendor.

ANATOMY

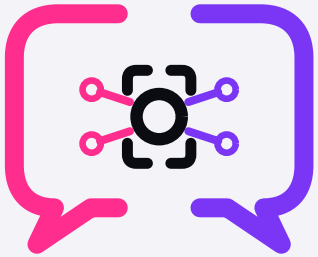

A left participant / source

B right participant / consumer

C shared context core

02 Logo system

PRIMARY MARK

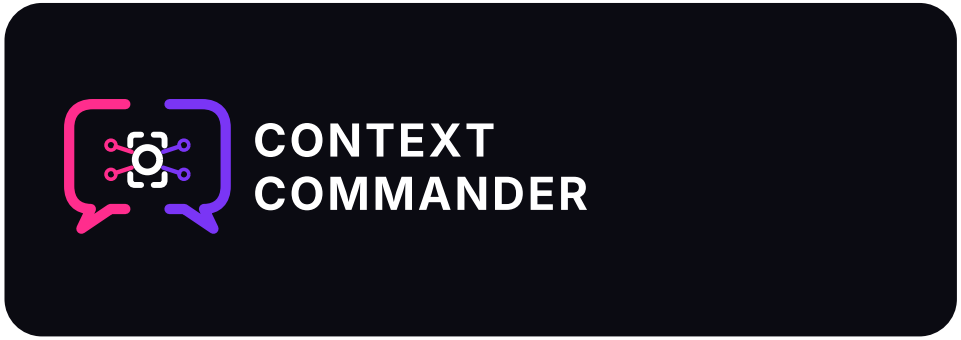

ON LIGHT

ON DARK

HORIZONTAL LOCKUPS

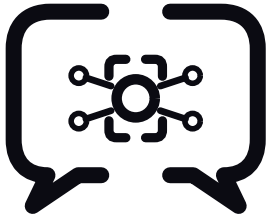

STACKED LOCKUP

MONOCHROME

SMALL-SIZE ICON

192px

64px

32px

Below 48 px use the simplified favicon. The full relay-node detail is intentionally removed at tiny sizes.

03 Color system

PRIMARY PALETTE

Context Pink

#FF2D8D

Primary brand accent / active context

Relay Violet

#7A35F5

Shared / relay / secondary identity

Void

#0B0B12

Primary dark surface

Paper

#FFFFFF

Primary light surface

Mist

#F4F3F8

Neutral panel background

USAGE RULE

No gradients required.

The primary logo system uses flat solid colors. This keeps SVGs crisp and reliable in favicons, docs, terminal-related surfaces, print and monochrome export.

Pink on Void primary accent

Violet on Void relay / large graphics

ACCESSIBILITY NOTE

Use black/white for body text. On light backgrounds, use darker semantic variants for small text; reserve raw brand pink/violet for identity, icons and larger graphic elements.

04 Clear space & scale

CLEAR SPACE

X minimum clear space = 1× context-core ring diameter

MINIMUM SIZES

Full mark	**48 px**	Use full nodes + center details.
Favicon mark	**16-47 px**	Use simplified favicon.
Horizontal lockup	**220 px wide**	Below this, use icon only.
Print mark	**14 mm**	Below this, use simplified icon.

SHAPE INVARIANTS

- **Keep the inner-facing gaps**
  Both speakers remain visibly separate.
- **Keep opposite tails**
  The two participants must read as independent.
- **Keep balanced connectors**
  Both sides connect toward the shared context core.
- **No gradients required**
  Flat color is the canonical form.

05 Typography & wordmark

RECOMMENDED FAMILY

Inter / modern grotesk

The supplied wordmark SVGs are converted to vector outlines from Inter Bold. The font file is not required to render the SVG assets.

VOICE

CONTEXT COMMANDER

Uppercase, strong weight, generous tracking. Avoid novelty sci-fi fonts: the icon already carries the technical personality; the wordmark should remain durable and readable.

UI TYPOGRAPHY

Context Commander

Project: acme/context-commander

artifact.updated

Claude Code · via shared project context

```
ccd project resolve acme/context-commander
```

Use brand colors as accents, not as the only text colors. UI text should primarily use neutral black/white for contrast.

06 Usage: do / don't

DO

- **Use flat duotone mark**
  Keep the two voices visually distinct.
- **Use neutral center core**
  Shared context remains vendor-neutral.
- **Use correct light/dark asset**
  Choose the core color for the surface.

DON'T

- **Do not add gradients or glow**
  The canonical system is intentionally flat.
- **Do not swap pink/violet sides**
  Color assignment is part of recognition.
- **Do not close the inner gaps**
  Two participants must remain separate.
- **Do not skew, stretch or rotate**
  Preserve geometry and aspect ratio.
- **Do not use detailed mark below 48 px**
  Use the favicon variant.

Recognition test

If the icon still reads as two independent speakers sharing one central context when shown in monochrome, the geometry is doing its job. Color strengthens identity; it must not be required to explain the concept.

07 Digital implementation & assets

CANONICAL TOKENS

```
--cc-context-pink: #FF2D8D;
--cc-relay-violet: #7A35F5;
--cc-void: #0B0B12;
--cc-paper: #FFFFFF;
--cc-mist: #F4F3F8;
```

SVG ASSETS

```
cc-mark-on-light.svg / on-dark.svg
cc-logo-horizontal-*.svg
cc-logo-stacked-*.svg
cc-mark-mono-black.svg / white.svg
cc-favicon.svg
cc-app-icon-dark.svg / light.svg
```

IMPLEMENTATION NOTES

- **SVG is canonical**
  PNG exports are convenience assets only.
- **Flat vector system**
  No filter, shadow or gradient is required.
- **Outlined wordmark**
  Horizontal and stacked wordmarks ship as vector outlines.
- **Use favicon below 48 px**
  Do not force relay-node detail at tiny sizes.
- **Keep branding separate**
  Brand tokens should not replace semantic UI colors.
- **Prefer neutral UI text**
  Pink/violet are identity accents, not body-copy colors.

Brand principle

Two speakers remain independent. Context Commander is the shared layer between them.
